## Custom product width<sup>1</sup>

Standard product length of 1250mm can be modified **upon request only for orders above 50lm /160lf of total length**. The minimum available length of the profile is  $L_{min}$  **650mm/25.6"** and the maximum length is  $L_{max}$  **1400mm/55.12"**. The length can be only modified in modules of **M 75mm/2.95"**.

Please note that **custom lead time and pricing** will apply. Contact us for more detail.

# Pixels Retractable Room Division Sliding System

## Operations

The mechanism on this vertical curtain division allows for the following operations:

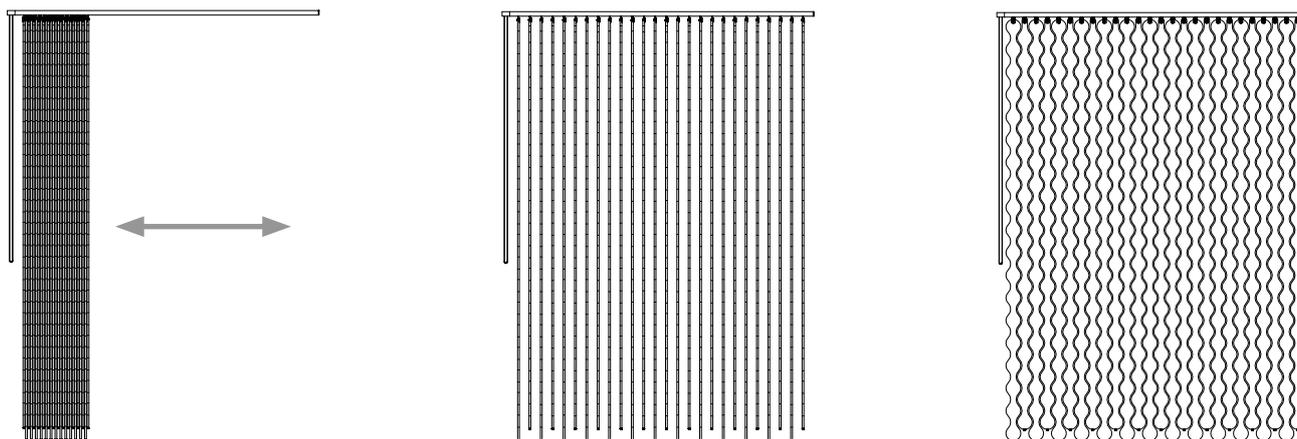

Sliding slats from a stacked position to an extended position

Rotating slats for an open or closed position

Extended Open Position

Extended Open Position

Extended Closed Position

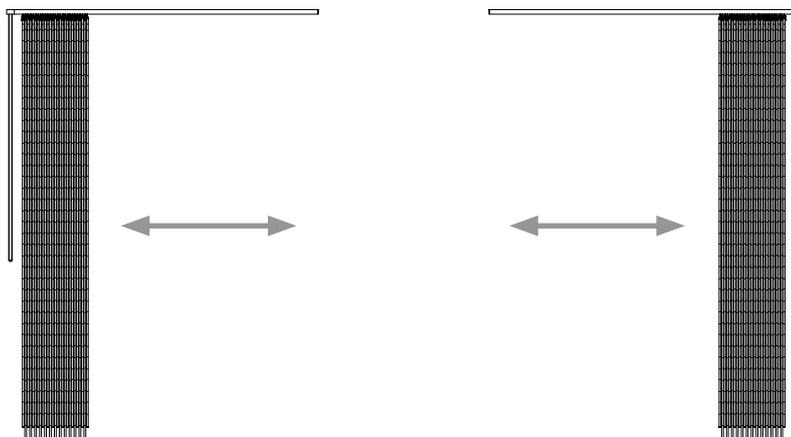

## Sliding

The sliding always happen in the same direction. When the vertical slats are stacked, they remain close to the chain mechanism. If you want to change the direction of the sliding, you can always rotate the whole module in the horizontal plane by 180° upon installation.

Stacked Slats on the Left

Stacked Slats on the Right

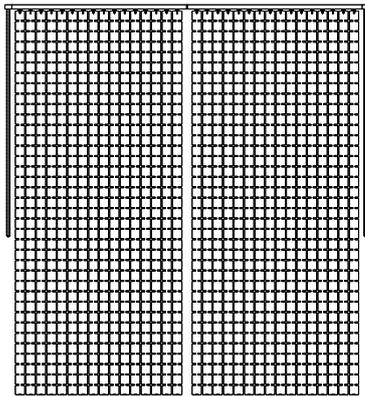

NOTE: Only one Length and Shape Option of this product is represented here. The same information applies to all product options.

# Pixels Retractable Room Division

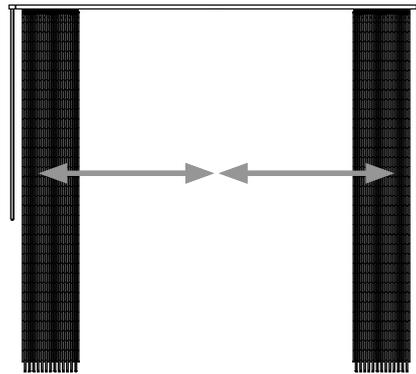

## Combination of Modules

It is possible to install the modules right next to each other to create different configurations. It is important to note that you will have to plan this properly so that the chain system for operating the curtains remains at an optimal location.

Below you will see an example of how to combine two modules for a centered opening.

Extended Closed Position

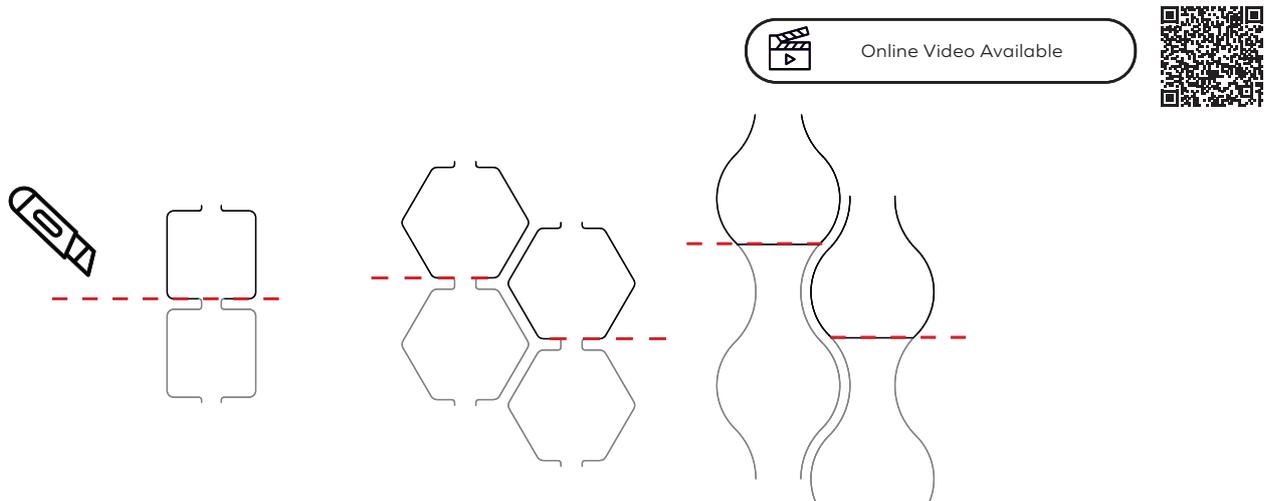

Stacked Position

On the example above you will notice the following:

- These modules are symmetrical, so there will be an opening in the center that indicates where the curtain will open. This can be changed upon installation !
- There will be two different chain mechanisms located at each side to operate each module independently.

### On-site adjustments

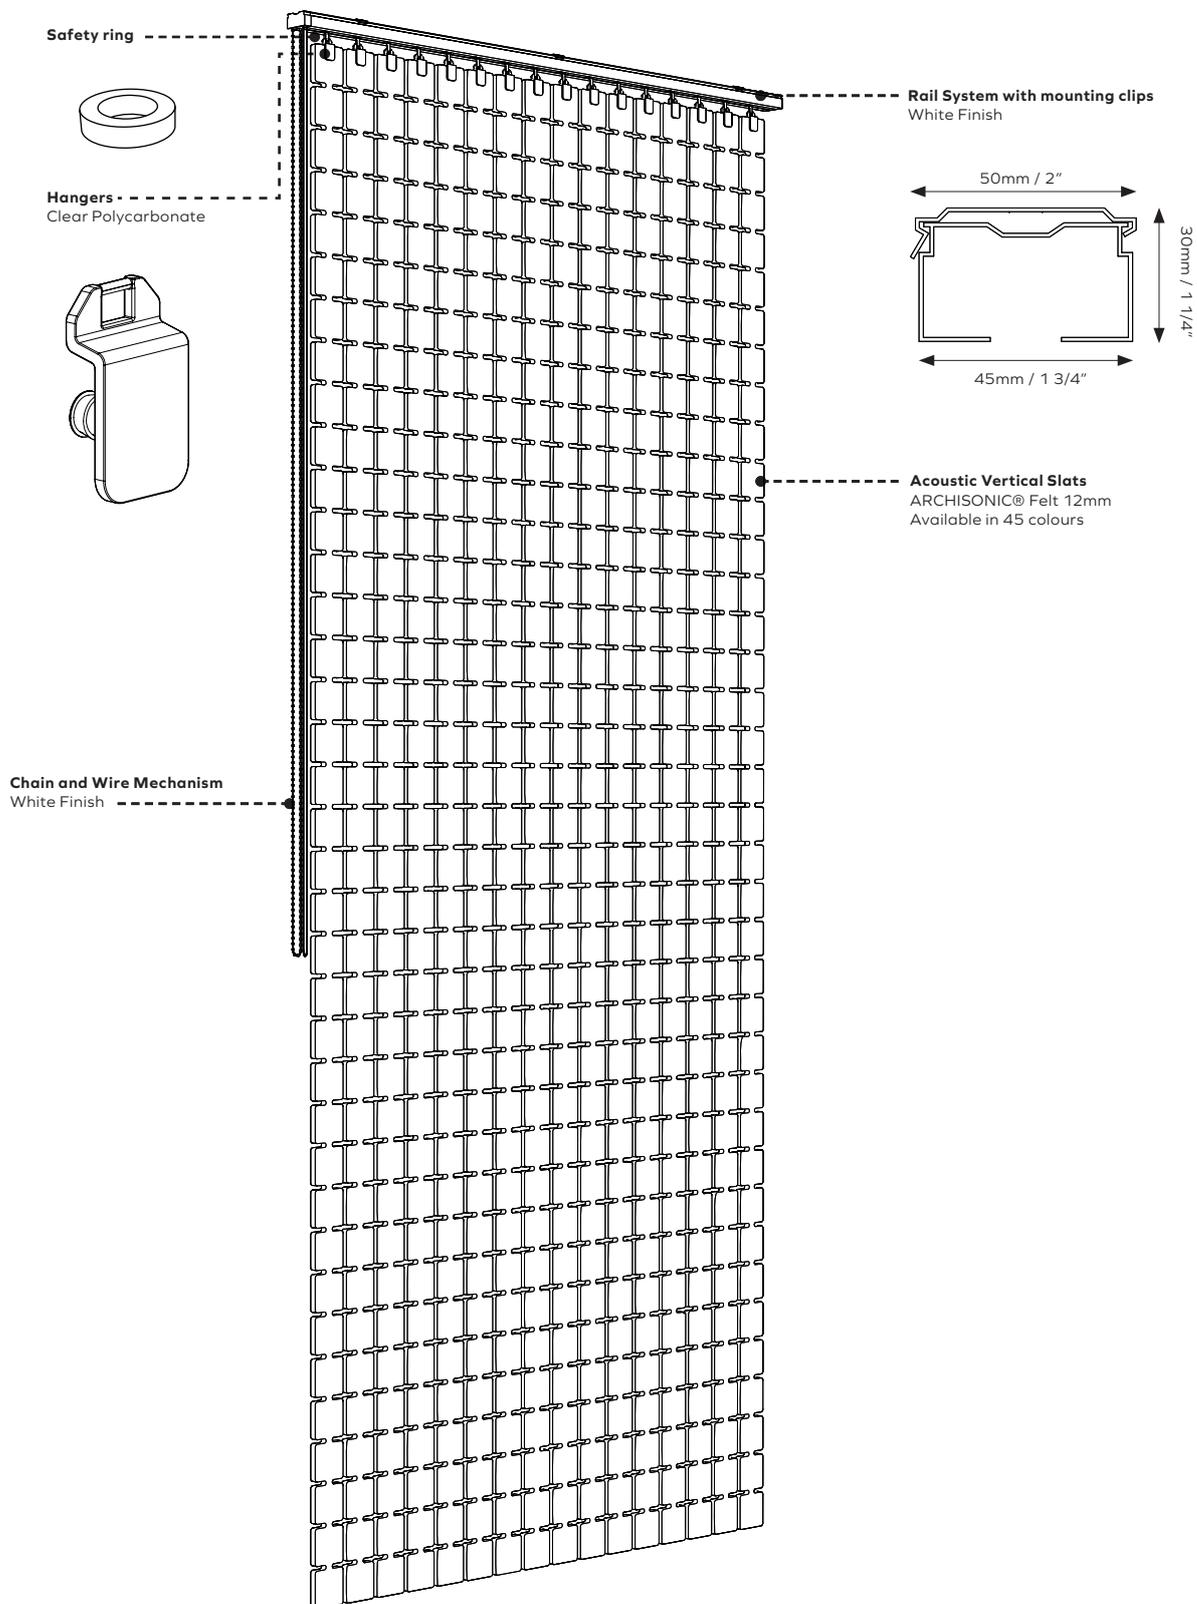

The height of the slats can be adjusted on site if needed. For this, we recommend to cut the slats at the junction between the shapes, following the diagram below:

Please note no modifications to the length of the rail can be made on site. The mechanism inside the rail has been specifically assembled for the rail's length. If you require custom lengths, contact our Project Management Team.

## Acoustic Performance

### Testing Standards

ISO 354:2003	Acoustics — Measurement of sound absorption in a reverberation room
ISO 11654:1997	Acoustics — Sound absorbers for use in buildings — Rating of sound absorption
ASTM C423-17	Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method
ASTM E795-16	Standard Practices for Mounting Test Specimens During Sound Absorption Tests

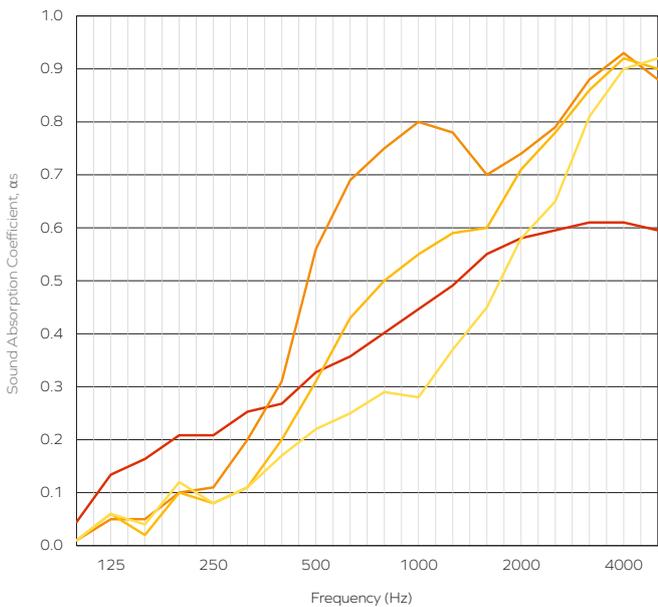

Acoustic Test Results	$\alpha_w$	SAA	NRC
12mm Pixels - Hanging Partition <sup>1</sup>	0.40 (H)	0.39	0.40
12mm Pixels - Closed Configuration <sup>2</sup>	0.45 (MH)	0.54	0.55
12mm Pixels - Half Open Configuration <sup>2</sup>	0.35 (H)	0.41	0.40
12mm Pixels - Open Configuration <sup>2</sup>	0.30 (H)	0.30	0.30

1 - Measured free-hanging at the center of the testing facility  
 2 - Measured with a 150mm air gap between the panel and the wall surface

The NRC rating is calculated as the average of the absorption coefficients measured at frequencies of 250Hz, 500Hz, 1000Hz and 2000Hz and round to the nearest 0.05. SAA rating is calculated as the average of the sound absorption coefficients of a material for the twelve one-third octave bands from 200Hz through 2500Hz and rounded off to the nearest 0.01.

### Acoustic Performance

Frequency (Hz)		125	250	500	1000	2000	4000
12mm Pixels - Hanging Partition	$\alpha_p$	0.10	0.20	0.30	0.45	0.60	0.60
12mm Pixels - Closed Configuration	$\alpha_p$	0.05	0.15	0.50	0.80	0.75	0.90
12mm Pixels - Half Open Configuration	$\alpha_p$	0.05	0.10	0.30	0.55	0.70	0.90
12mm Pixels - Open Configuration	$\alpha_p$	0.05	0.10	0.20	0.30	0.55	0.90

- 12mm Pixels - Hanging Partition
- 12mm Pixels - Closed Configuration
- 12mm Pixels - Half Open Configuration
- 12mm Hanging Partition

The table represents the practical sound absorption coefficient ( $\alpha_p$ ) in accordance with ISO 11654. The graph represents the sound absorption coefficients ( $\alpha_s$ ) in the third octave band center frequencies in accordance with ISO 354. Measurement used Pink Noise as excitation signal in a reverberant room.
